REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the claimed method of forming a green substrate from ceramic fibers impregnated with water, nanoclay and either a ceramic precursor material or ceramic material then drying, calcining, and firing the substrate forming a composite of less than 65 percent porosity is not found in the prior art either singly or in combination. The closest prior art references are considered Nixdorf (US 6,913,059) which is considered to disclose drying web bearing a ceramic binder but not calcining and firing a substrate and Xun (US 6,287,510) which is considered to disclose ceramic batch extrusion with firing cycle green structure involving dried ceramics but no impregnation dispersion comprising water, nanoclay, and either a ceramic precursor material or ceramic material. Other prior art references cited in this action are considered to disclose one or more features of the claimed invention, but along with the closest prior art references, not whether a person of ordinary skill in the art, possessed with the understandings and knowledge reflected in the prior art, and motivated by the general problem facing the inventor, would have been lead to make the combination recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
